PROFESSIONAL SUMMARY

A young, dynamic, and result-oriented graduate of Mathematics with strong analytical, problem-solving, and research abilities. I am a fast learner and an open-minded team player with growing expertise in cybersecurity, including threat detection, incident response, and secure systems analysis. I am passionate about advancing knowledge through innovative research at the intersection of mathematics, cybersecurity, and data-driven defence. With a deep commitment to academic excellence, I aim to pursue a career in research and academia, contributing meaningfully to scientific discovery, cybersecurity innovation, and the training of future professionals.

Interests: Applied Mathematics | Mathematical Modeling | Linear Algebra | Calculus & Analysis | Differential Equations | Probability & Statistics | Computational Mathematics | Algorithm Analysis | Network Security | Cyber Threat Analysis | Incident Response | Secure Systems Design | Digital Forensics | Risk Modeling and Assessment

EDUCATION

University of Ilorin, Ilorin, Kwara, Nigeria,
Bachelor of Science (B.Sc.) in Mathematics

Sep 2019 - Aug 2024

Final Grade: Second Class Honours(lower Divison)

CGPA:2.71/ 5.0

SKILLS AND COMPETENCIES

Analytical & Laboratory Skills:

Mathematical Modelling | Data Analysis | Network Traffic Analysis | Packet Inspection | Log Analysis | Vulnerability Assessment | Incident Response Procedures | System Monitoring

Personal Strengths:

Excellent Communication | Strong Analytical and Problem-Solving Skills | Interpersonal Relationship Skills | Leadership & Team Collaboration | Organisational Skills | Time & Project Management | Fast Learner | Attention to Detail

Software & Technical Tools:

Python(Basics) | Wireshark | Splunk (Basic) | Linux Command Line | MATLAB | Machine Learning (Beginner) | VS Code | Git/GitHub

PERSONAL PROJECT

Penetration Testing Project

- Conducted network scanning and enumeration with Nmap.
- Simulated attacks on Metasploitable VM using Metasploit.

Packet Analysis & Network Monitoring

- Analysed PCAP files with Wireshark to identify malicious patterns.
- Applied statistical and pattern recognition methods to detect irregular traffic patterns.
- Filtered and categorised traffic by protocol, source/destination IP, and port usage for deeper insight.
- Mapped out the Command-and-Control (C2) server IP addresses used during the infection by tracking outbound malicious connections.

- Identified the likely fake domain impersonating Google Authenticator through DNS request analysis and suspicious HTTP traffic.
- Identified the IP address of the infected Windows client through traffic correlation and packet flow inspection

OSINT Tools and Vulnerabilities Assessments

- Conducted open-source intelligence analysis to identify vulnerabilities across simulated network systems.
- Utilised tools such as Nmap, SpiderFoot, and theHarvester to map and assess system weaknesses.
- Produced detailed assessment reports with actionable recommendations for improved security posture

Firewall Administration

- Configured and tested firewall rules using UFW and iptables on Linux systems.
- Managed inbound and outbound network traffic to IP and ports

Encryption & Data Protection

- Explored encryption basics using OpenSSL, including hashing and secure communication concepts.
- Applied fundamental principles of data confidentiality and integrity in Linux-based environments.
- Gained practical understanding of securing sensitive information using command-line tools.

Malware Analysis & Network Monitoring

- Performed hands-on malware hash analysis using VirusTotal to identify potential threats.
- Investigated file hashes to detect malicious patterns and determine threat classifications.
- Interpreted analysis reports to understand malware behaviour and risks in controlled learning exercises.

INDUSTRIAL EXPERIENCE

Virtual Soc Internship (2-Month)

November 2025 - December 2025

HSC Consult

- Analysed PCAP files to identify suspicious network activity, potential threats, and attack patterns in a controlled virtual environment.
- Reviewed alert dashboards to investigate security events, correlate findings, and understand incident response workflows.
- Documented analysis results and prepared reports, developing practical skills in cybersecurity analysis and threat assessment.
